

Testing & Evaluation — AI Job Application Assistant

Test design

Two different AI-related apprenticeship roles were used: data/AI in financial services, then AI automation/digital growth/CRM/marketing.

Version 2 improvements

Explicit DIRECT MATCH / TRANSFERABLE / RELEVANT LEARNING / DEVELOPMENT GAP / NOT ENOUGH EVIDENCE categories.

Clear separation of courses from professional experience.

Evidence-based career-development assessment.

Apprenticeship-context rule.

Business-value analysis.

Observed improvement

Version 2 produced clearer distinctions between demonstrated skills, transferable experience, studied subjects and development gaps.

Limitations

Depends on the quality and completeness of the supplied CV and advert.

Does not independently verify every CV claim.

Does not replace employer selection decisions.

Currently a prompt/workflow project rather than a software application.

Further development would be needed for structured extraction, APIs, Python and workflow integrations.

Next development

A future Version 3 could accept structured CV/job inputs, extract requirements automatically, score evidence consistently, store results and generate outputs through a repeatable software workflow.
