

Project 1 — AI Job Application Assistant

Status

Portfolio evidence package — Version 2 tested.

Purpose

A reusable, evidence-based AI workflow that analyses a job or apprenticeship advert against a candidate CV and produces a structured application assessment.

Objective

Identify direct matches, transferable skills, relevant learning, development gaps and insufficient evidence without inventing experience or qualifications.

Success criteria

Use the supplied CV and advert as evidence.

Separate professional experience from courses/training.

Recognise transferable experience.

Describe career-development evidence without guessing motivation.

Identify genuine technical gaps.

Test the workflow against different AI-related roles.

Development

Version 1 was tested against the Mizuho Data & AI Apprentice role. Version 2 then added explicit evidence/classification rules and was tested against an AI Digital Growth Apprentice role.
