

Test #001 — Mizuho Data & AI Apprentice

Role

Mizuho EMEA Corporate Services, London — Level 4 Data Analyst apprenticeship.

Candidate evidence identified

Financial-services experience at GlobalData.

Salesforce CRM for prospect leads, subscription order processing, client relationships and sales activity.

Telephone communication with potential and existing clients.

Email marketing and prospect/contact data.

Excel weekly, monthly and yearly forecasting.

Company, industry, decision-maker and market research.

AI and responsible-AI learning.

Development gaps

Python/coding, SQL/database querying, machine learning, Power BI/data visualisation and professional data-analyst experience were not demonstrated on the CV.

Interpretation

The workflow did not treat the candidate as having no experience. It separated existing financial-services, CRM, communication, research and data-handling experience from technical skills the apprenticeship is designed to develop.

Result

Version 1 identified relevant experience and gaps. The test showed that clearer evidence rules and explicit classification were needed, leading to Version 2.
